EXAMINER'S AMENDMENT

An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Holby Abern on January 28th, 2010.

The application has been amended as follows:

Claim 11 (currently amended): A gaming device comprising:

an input device;

a display device;

a processor, and

a memory device which stores a plurality of instructions, which when executed by the processor, cause the processor to operate with said display device and the input device to:

associate a plurality of values with a plurality of player selectable selections wherein each selection is associated with one of said values and each of said values is greater than zero,

display to a player the association between at least one of the values associated with one of the selections and said selection,

after displaying said association between at least one of the values associated with one of the selections and said selection:

(i) cause said association between at least one of the values associated with one of the selections and said selection to not be displayed to the player, and

(ii) thereafter, display a rearrangement of the selectable selections in a manner discernable by the player prior to the player's

selection of one of the selectable selections, wherein after the rearrangement of the selectable selections on the display, each selection remains associated with said previously associated value, after displaying the rearrangement of the selectable selections, enable the player to select one of the selections, and provide the player the value associated with the selected selection.

Claim 21 (currently amended): A method for operating a game of a gaming device, said method comprising the steps of:

- (a) causing a processor to operate with a memory device, a display device, and an input device to:
 - (i) trigger the game;
 - (ii) associate a plurality of values with a plurality of selections, wherein each of said values is greater than zero and each selection is associated with one of said values;
 - (iii) display said plurality of selections;
 - (iv) reveal one of said values associated with one of said selections to the player; and
 - (v) after revealing to the player one of said values associated with one of said selections, conceal said revealed value from the player; and
 - (vi) display a rearrangement of the selections in a manner discernable by a player prior to the player's pick of one of the selections, wherein after the rearrangement of the selections, each selection remains associated with said previously associated value;
- (b) thereafter, enabling the player to pick one of the selections; and
- (c) causing the processor to operate with the memory device, the display device, and the input device to communicate said value associated with said picked selection to the player.

Claim 22 (currently amended): A gaming device operable under control of a processor, said gaming device comprising:

- an input device;
- a display device; and

a memory device which stores a plurality of instructions, which when executed by the processor, cause the processor to operate with the display device and the input device to control a play of a game by:

(a) directly associating a plurality of offers with a plurality of player selectable selections, wherein each selection is associated with one of said offers, and each of said offers is greater than zero and payable to a player;

- (b) enabling the player to select one of said selections;
- (c) revealing the offer associated with the selected selection;
- (d) enabling the player to accept or reject the revealed offer;
- (e) if the player accepts the revealed offer, providing the revealed offer

to the player;

- (f) if the player rejects the revealed offer:

(i) concealing said revealed offer from the player, and

(ii) thereafter, displaying a rearrangement of the selectable selections in a manner discernable by the player prior to the player's subsequent selection of one of the selectable selections, wherein after the rearrangement of the selectable selections by the display device, each selection remains associated with said previously associated offer;

(g) after displaying the rearrangement of the selectable selections, enabling the player to pick one of the selections; and

- (h) providing the player the offer associated with the picked selection.

End of Amendment

REASONS FOR ALLOWANCE

The following is an examiner's statement of reasons for allowance: The prior art of record when considered alone or in combination fails to teach or suggest the claimed triggering of a game including the presentation and respective association of a plurality of positive values with a plurality of selections such that subsequent to the respective association, one of said values associated with a selection is temporarily revealed to a player, and displaying a rearrangement of the player selectable selections in a manner discernable by the player prior to the players selection of one of the selectable selections and communicating the value associated with the player selection to the player.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
